Cogynt Dialog

AI-Enabled Violence and Suicide Risk Assessment for Schools

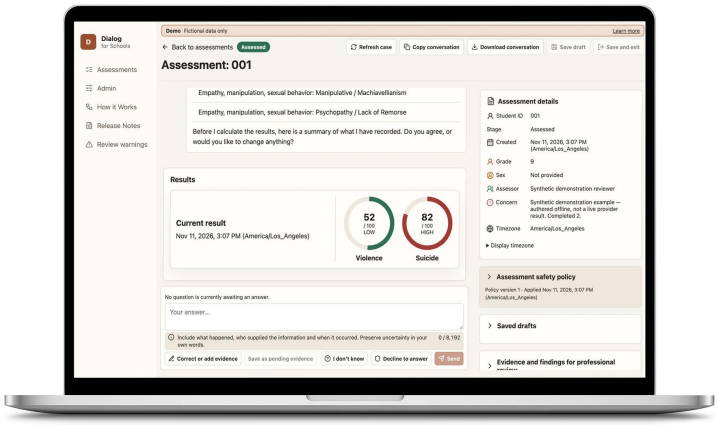

Combining professional judgment with explainable, evidence-based analytics to help teams assess risk consistently and plan a response.

The problem: expertise does not scale

School counselors and administrators must assess concerning student behavior and determine whether it signals a risk of violence or suicide, often with limited time and access to specialized expertise. The current tools often depend on time-consuming, repetitive checklists or the availability of specialized personnel. Results can vary with the assessor's interpretation and may provide limited guidance on what to do next. Teams need a more consistent, scalable and practical way to assess cases involving violence or suicide risk.

The solution: Cogynt Dialog

Cogynt Dialog combines qualitative expert judgment with quantitative behavioral analytics in a guided, plain-English conversation. It brings expert-informed knowledge into each assessment, asks questions tailored to the case and explains how the findings contribute to concern. Separate assessments of violence and suicide risk lead to recommended mitigation actions and a documented case report. Dialog makes structured assessment more accessible and scalable while keeping the professional fully in control.

Fast start;

Simple to use;

Guided process;

Limited training;

Risk scores come from an expert-defined model, not an LLM;

Expert always has the final say

How it works

1 Describe and clarify	Start with what is known. Cogynt Dialog asks case-specific follow-up questions, then lets the user confirm or correct the findings.
2 Assess and explain	An expert-defined model scores the findings as behavioral risk indicators for violence and for suicide, each assessed separately. The output shows which findings led to each risk level, how much each one contributed, and when several warning signs reinforce one another.
3 Explore mitigation	Review what drives concern and compare the projected effects of individual mitigation steps or combinations of steps.
4 Document and decide	Receive a structured case report, at any time in the process, with the supporting evidence, scenarios, proposed actions and full transcript. The professional always decides how to proceed.
